Immediate Opening Research Technician

Summary

The Research Technician is responsible for accuracy of testing data, including equipment safety, in conjunction with the development of new products and processes. This position reports directly to the Plant Quality Manager, and VP of Technology.

The Research Technician should be capable of following instructions and test methods, and recording testing information.

Job Duties:

Responsibilities include:

- Perform analytical testing with accuracy and precision; prepare samples and/or materials according to laboratory procedures.
- Conduct test results; keep accurate records and data for projects.
- Support trial (scale-up) activities including material preparation, testing, set-up, and documentation of trial results.
- Maintain cleanliness of instruments and equipment to ensure availability.
- Participate in and complete company safety and training programs.
- Complete tasks independently and in a team environment as needed.
- Document observation details in laboratory notebook
- Maintain and document laboratory sample inventory.

The ideal candidate has:

- Manufacturing or laboratory experience highly desirable.
- Have base level of proficiency in Microsoft Office products, specifically Excel.
- Ability to read instrument/equipment manuals and follow operating guidelines.
- Capable of safely lifting/moving heavy objects when required (25-50 lbs).

Job Type: Full-Time
